DHIA COWS ESTABLISH ANOTHER ALL-TIME PRODUCTION RECORD IN 1955

It's an old story. DHIA cows have again established an all-time high production record in 1955. In 1955, DHIA cows produced on the average 9,502 pounds of milk and 375 pounds of butterfat. The previous all-time high milk and butterfat production was made in 1954.

The following table shows the average production of association cows for various years since 1906:

<u>Year</u>	<u>Cows on test (number)</u>	<u>Average production</u>	
		<u>Milk (pounds)</u>	<u>Butterfat (pounds)</u>
1906	239	5,300	215
1910	<u>1/</u> 25,000	<u>1/</u> 5,730	<u>1/</u> 227
1920	203,472	6,175	247
1930	507,549	7,642	303
1940	676,141	8,133	331
1950	1,088,872	9,172	370
1951	1,186,615	9,195	370
1952	1,166,297	9,192	366
1953	1,226,588	9,253	368
1954	1,311,698	9,363	372
1955	1,333,866	9,502	375

1/ Estimated.

The same fundamental practices are still being used by DHIA members to improve the producing capacity of their dairy herds. These fundamental practices are:

- (1) Cull low-producing unprofitable cows from the herd.
- (2) Feed the remaining cows according to their individual producing ability.
- (3) Select the best animals in the herd as breeding stock to improve the inheritance of the future herd for high-producing capacity.

Any dairyman can profit by following these practices. The low-producing herds can be quickly improved and the production level of the high-producing herds can be maintained by following the examples set by DHIA members.

The table on page 2 shows the production level of DHIA cows in 1955 by States.

SUMMARY OF THE 1954-55 DAIRY-HERD-IMPROVEMENT-ASSOCIATION RECORDS, BY STATES

State	Assoc- iations active 1-1-55 (number)	Cow-years (number)	Average production			State	Assoc- iations active 1-1-55 (number)	Cow-years (number)	Average production

DHIA PROVED-SIRE RECORDS TABULATED IN JULY 1956

Following is a list of 506 sires whose records were tabulated or retabulated by the Dairy Husbandry Research Branch in July 1956. Production records used in proving DHIA sires consist of 305-day lactation records standardized to a mature equivalent twice-a-day milking basis.

An asterisk at the end of a sire's registration number indicates a retabulated record. The asterisk may be followed by any number from 1 through 15 (i. e., *12) to indicate in which of the 15 printed lists his previous record appeared. Or the asterisk may be followed by the month and year (i. e., *May 51) of the DHIA letter in which his previous record appeared. Two asterisks following the sire's registration number, or following reference to a previous listing, indicate that the proved-sire tabulation or retabulation was requested by one of the States.

In case records from more than one herd were used, the reference is to the herd from which production records for the largest number of the sire's youngest daughters were reported. If the sire has been used in an artificial-breeding association, the name of the association is given.

Proved-sire records consisting of fewer than 10 comparisons are indicated as "preliminary proofs" because these records may be significantly changed when additional comparisons become available and are included in the proved-sire records.

Proved-sire records consisting of fewer than 25 comparisons with daughters resulting from artificial breeding are indicated as "preliminary AB proofs" because these records may be significantly changed when additional comparisons become available and are included in the proved-sire records.

To make the most intelligent selection of a sire, the dairyman should use these proved-sire records to single out the most promising sire and then make every effort to supplement these data with additional information gathered from the herds in which the dams and daughters made their records. Particular attention should be given to the feeding practices and environmental conditions under which the records were made, in order to be assured that the records of the daughters were not made under more favorable conditions than those of the dams or vice versa. It is especially important to determine that there has been no selection of daughters in making the comparison.
